# Mini Companion Projector

## Low Maintenance

Low Maintenance means lower cost. DLP technology enables a Filter-free design and therefore does not require a filter (that must be cleaned and replaced regularly). That saves time and money!

## No Colour Decay

Some LCD Projectors may develop colour decay after extended use, making images and video look yellow or faded. DLP Projector are virtually immune to colour decay, producing a sharp, clear image – even after year of use.

DLP Projectors are ultra-fast resulting in practically no blurring of video during presentations, Movie content, streaming video, and more.

## Faster Video Performance

DLP Projector feature incredibly high native contrast ratios. Black are really Black and Whites are really White, making your projected text extremely easy to read.

## Brilliant Colours

Many DLP Projectors feature Brilliant Colour Technology, which processes up to six colour or more (versus only three in LCD Projector) resulting in sharper color performance and offers a technological advantage in protecting against color decay.

## Compact and Light weight

DLP Projectors use a single DLP chip, allowing an efficient design for light weight, portable projector LCD systems require three imaging elements, which take up space and add weight.

## New DLP Technology

"Lower TCO-As no recurring Bulb replacement cost unlike LCD projectors"

"Uses same 60w Smart Adaptor as HP Laptops"

## Filter-Free Design

Most DLP Projectors feature a filter-free design LCD Projectors required a filter which must be cleaned and replaced regular, costing time and money.

## Sharp Readability
